

Surface Mount > 1812L Series

1812L Series

Description

The 1812L Series PTC provides surface mount overcurrent protection for applications where resettable protection is desired.

Features

- RoHS compliant, lead-free and halogen-free
- Fast response
- Compact design
- Low resistance
- Low-profile
- Compatible with high temperature solders

Agency Approvals

| AGENCY | AGENCY FILE NUMBER |
|--------------------|--------------------|
| c '71 0' us | E183209 |
| A | R50119118 |

Applications

- Plug and play protection for motherboards and peripherals
- USB peripherals
- PCI cards
- Game console port protection

continues on next page.

R $_{\min}$ = Minimum resistance of device in initial (un-soldered) state.

soldering of 260°C for 20 sec.

R min = Typical resistance of device in initial (un-soldered) state.
R min = Maximum resistance of device at 20°C measured one hour after tripping or reflow

I hold = Hold current: maximum current device will pass without tripping in 20°C still air.

⁼ Trip current: minimum current at which the device will trip in 20°C still air.

 $V_{\text{max}}^{\text{\tiny VW}}$ = Maximum voltage device can withstand without damage at rated current (I max) V_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max}) $V_{\text{\tiny J}}$ = Power dissipated from device when in the tripped state at 20°C still air.

den and Orace

Caution: Operation beyond the specified rating may result in damage and possible arcing and flame.

¹ Some older references to these devices may include "-C" in the Part Number. The "-C" should be omitted when placing new orders for the device.

² Part Number with note 2 tested and complied with AEC Q200.

Notes: The temperature rerating data is only for reference, please contact Littelfuse technical support for detail temperature rerating information.

 $V_{\rm max}$ = Maximum voltage device can withstand without damage at rated current (I max) $V_{\rm max}$ = Maximum fault current device can withstand without damage at rated voltage ($V_{\rm max}$) $V_{\rm max}$ = Power dissipated from device when in the tripped state at 20°C still air.

R $_{\rm min}$ = Minimum resistance of device in initial (un-soldered) state. R $_{\rm typ}$ = Typical resistance of device in initial (un-soldered) state.

R _{Imax} = Maximum resistance of device at 20°C measured one hour after tripping or reflow soldering of 260°C for 20 sec.

| | Temperature Min (T _{s(min)}) | 150°C | | |
| Pre Heat: | Temperature Max (T _{s(max)}) | 200°C | | |
| | Time (Min to Max) (t _s) | 60 – 180 secs | | |
| Time Maintained | Temperature (T _L) | 217°C | | |
| Above: | Temperature (t _L) | 60 – 150 seconds | | |
| Peak / Classification | on Temperature (T _P) | 260+0/-5 °C | | |
| Time within 5°C o Temperature (t _p) | f actual peak | 20 - 40 seconds | | |
| Ramp-down Rate | | 6°C/second max | | |
| Time 25°C to peak | Temperature (T _P) | 8 minutes Max. | | |

- All temperature refer to topside of the package, measured on the package body surface
- If reflow temperature exceeds the recommended profile, devices may not meet the performance requirements
- $-\,$ Recommended reflow methods: IR, vapor phase oven, hot air oven, $\mathrm{N_2}$ environment for lead
- Recommended maximum paste thickness is 0.25mm (0.010inch)
- Devices can be cleaned using standard industry methods and solvents
- Devices can be reworked using the standard industry practices

Average Time Current Curves

The average time current curves and Temperature Rerating curve performance is affected by a number or variables, and these curves provided as guidance only. Customer must verify the performance in their application.

WARNING

- Users shall independently assess the suitability of these devices for each of their applications
- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration
- Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses
- Circuits with inductance may generate a voltage (L di/dt) above the rated voltage of the PPTC device.
